

RealBurn

Burn & Security

Whitepaper

RealBurn Project

Great vision, great features

REALBURN is an hyper-deflationary token, including the Buy-back approach currently present in the stock market.

REALBURN of tokens in circulation : it's the end of fake burn.

A secure system that protects everyone's interests : no scam, no hidden price control, no team/dev wallet, ownership renounced, an audited contract and LP locked for 1 years.

It's time to change! **It's time to WIN!**

The Real Burn

Many brag about burning by eliminating tokens in order to increase the value of the remaining tokens which is totally wrong!

The most just burn tokens that are not in circulation.

So this has no impact on the price of the tokens.

Our real burn is to use 8% of each transaction (buy or sell) to buy outstanding tokens and burn them.

In an automated way, the contract will allow BNB to be stored, then it buys back tokens and burns them for real !

Who is **Vulcain** ?

Vulcan is our hero. He is in charge of burning with buy back.

He's no kidding, he burns everything!

The Real Security

Just like you, we can't stand the numerous scams present on the bsc.

That's why we have put in place many protections.

The fact is that very often these scams are caused by the members of the team.

The first protection is to make inaccessible everything that is not necessary for the good functioning of the project.

In concrete terms the LP is locked for at least 1 years and the burn is done automatically.

The contract will be renounced 1 week after the launch in order to correct any unforeseen eventuality. The team has no wallet. They are rewarded with a 3% fees on transactions.

Marketing and development are essential to the success of the project, they represent 4% fees on each transactions. Finally the contract will be audited by SPYON.
